LexJet WR Window Graphic Film

Installation Guide

Tools:

· Non-abrasive glass cleaner

· A soft-edged squeegee, preferably something utilizing Suede Teflon on one edge

· Lint-free cloth

· Masking tape, if you prefer to hinge your graphic prior to installation (3M #234 is a good quality tape that works great for hinging graphics)

Installation:

1. Clean application surface, depending on the size of your graphic. It may be a good idea to clean the surrounding area to simply help prevent dust and other small debris from contaminating your graphic.

2. Tack your graphic in place with a few small pieces of low-tack masking to ensure both sizing and placement.

3. Use a horizontal strip of masking tape to hold the graphic in place from the top.

4. Peel the liner back a few inches from the top, squeegee that section of the graphic down, and then progress in the same way a few inches at a time.

Note: *This type of media can mar with improper handling and installation technique.*
